

# tcolorbox environments

You need a **very recent** (2017) edition of the package

col1

col2

col3

And use the tcolorbox package instead

tcolorbox has an option poster

```
usepackage[most,poster]{tcolorbox}
```

This makes alignment much much easier. Even relative postioning of boxes with automatic alignment is supported. The possibilities are endless. The Resources folder of the repository contains the recent 476 page tutorial. You need a very recent version (2017) of the package. If you insall the newest texLive distribution of 2017 everything works.

A

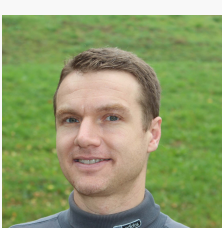

My second box without a title

B

Third box

My third box

C

Get me out, I do not belong here....
